

Assess

Turn-key apps testing for Windows

Apptimized Assess provides you with a cloud-based solution with the latest available versions of Windows platforms, ready for your ad-hoc testing needs

Application testing is a necessary and basic component for companies producing ISV (Independent Software Vendors) as well as companies who are the users of these applications. An incorrect operation of a single application or its incompatibility with other applications can lead to products or Windows platforms falling over and leading to non-productive systems.

Improving your infrastructure and supporting the wider business requires time and money. Cutting corners to make savings can mean that installing new apps on your computer can lead to gaps in security. This is where our cloud solution reduces risk, saves time and money with no hardware investment.

BENEFITS TO YOUR ORGANIZATION

Easy manual testing

Our comprehensive Assess tool allows you to test both application and packages quickly and easily in an environment that's prepared and ready to go.

Test in Cloud

Test both independently and for its compatibility with other applications. Testing in the cloud acts as a remote simulator of your current business environment, allowing you to test and receive more realistic outcomes.

Stay modern

Using Assess means all your applications new releases can be tested against your current OS build and new version OSs as they are released.

Key Product Features

Keep in mind real conditions

Some applications cannot work independently. Firstly, you must configure the operation of interrelated components. Prerequisites will make it possible to establish dependencies between applications and allow to conduct a test case accurately. Assess allows you to test your applications in readiness for installation in a separated environment and identify any potential conflicts before they happen in the live environment.

Generate reports

Each step performed during the testing process of the application is recorded. Before uploading the results, you can edit the recorded actions and leave additional supporting comments if necessary. This creates a document*, describing each step in the test case making problem solving simpler and quicker, with the ability to reproduce the test case should you need to.

*Documentation formats are HTML & PDF

Virtual machines in your browser

Assess is not reliant on your environment; Apptimized has prepared virtual machines ready for your testing needs. All you need is access to the internet, Apptimized provides unrestricted, 24/7 access so your users can work any time, any place (with internet!).

Mass testing

If necessary, you can conduct parallel testing with several Virtual Machines and no need to load your local machine. Saving time waiting for programs to install or files deployed to the machine.

Custom reports

Fully customizable templates so you can maintain consistency with your internal documentation. If you need to make changes, these will be automatically applied to testing documentation already completed.

Easy access to the latest Windows build

For testing, we offer over 25 platforms, each with basic information, including the version history. In addition, the database of platforms available is monitored and regularly updated. Apptimized monitor new versions releases so you are provided with the latest information and releases to test against.

Azure integration

If you have previously or currently worked with Azure Virtual Machines, no need to change your processes. Apptimized can be configured in order to integrate them and allow to run additional tests on them if necessary.

Testing made easy

Intuitive and user-friendly interface gets you ready to start testing in no time. Once you're all set and depending on the complexity you could have your first test case completed in less than 10 minutes. Apptimized offers you flexibility in its configuration, allowing you to add colleagues and restrict permissions so they only access the workflow stages they need in order to work with the applications. Partners have a fully customizable tenant whitelable system to ensure consistency with your corporate identity. This adds value to partner customers, giving them access so they are able to 'rent' Apptimized.
