

Workspace

Scalable, robust and secure
discovery and packaging toolkit in
the cloud

Easy to use environment created by application packagers for application packagers, regardless of software packaging skills

Working in the packaging industry usually involves working on the routine tasks, which are time consuming. This takes valuable resources away from solving any complex issues that may arise; they're too busy doing the necessary routine tasks.

Workspace has been designed to specifically enable automization of the routine tasks of the packaging specialist. This frees up time for the specialists to focus on the complex and critical tasks.

The system supports the most common and the latest packaging formats: App-V, MSI, MSIX, Intunewin. Apptimized is constantly working to improve the product, watching developments in the area of application packaging so we can incorporate them.

BENEFITS TO YOUR ORGANIZATION

Packaging toolset

Use a bunch of third-party packaging tools collected in Workspace Launcher to perform packaging and testing actions.

Best experience based

Tool takes into account not only the basic features of software packaging but also covers the cases that are most needed in the workplace.

Modern formats supported

Need your package in several formats? Once the basic entry has been completed, this step does not need repeating, simply request the package format of your choice and repackage to suit your needs.

Key Product Features

Edit your package

Simply setup the Apptimized environment to suit your projects needs or adjust from package to package. Apptimized has been created in collaboration between Packagers and Developers, so we tick all the boxes not previously considered by similar services. Apptimized packaging tool (APE) allows you to record the basic launch of the application, change the configuration and work with complex scripts. If necessary, the finished package can be easily repackaged in another format. All working documents are available for editing to enable you to change any configuration as you go.

Packaging toolkit

Use Apptimized Workspace Launcher for collecting unlimited amount of trusted packaging tools from third-party vendors in one place without the need to install them from thousands of vendor's resources. You are able to use tools for lots of packaging cases like editing MSI files via the handy UI, managing tables or converting Win32 applications into virtual packages for deployment to user devices.

Modern workspace

Apptimized Workspace is continuously improving, adding new features and technologies once fully tested and supported.

Custom settings per project

Working across multiple projects each with their own templates saves you time when completing the documentation. Simply apply the individual template to the specific project and if you need to make changes down the line, it will save automatically across the project.

Create and test in one place

Once your package has been generated, Apptimized provides access to clean virtual machines where you can carry out checks on your packages performance across the different Oss and ensure it is functioning correctly.

Any package any time

Workspace gives you the ability to create multiple application formats during the packaging process, on the first pass and in the future. The package generated can be repackaged into a new format and enable you to make any necessary adjustments.

Best practices for packaging Workspace

Workspace is designed to be intuitive and easy to use, so no matter what your experience you can start working quickly.
