Updates

No need to spend time continually monitoring updates for OSs and applications by yourself

Apptimized Updates – receive instant notifications about applications in your portfolio that were updated by the vendor, combined with notifications on Microsoft Windows updates.

Monitoring updates from vendors is one of the most monotonous tasks of any technical department. Whatever your business focus, an application update process must be accounted for, as untimely updates of your applications and their incompatibilities with your software infrastructure or the lack of awareness of possible vulnerabilities can lead to the failure of the whole company.

There is no longer a need to monitor updates manually. Apptimized offers you a flexible notification system to keep you informed about your application portfolio updates as well as releases of new versions of Microsoft Windows.

BENEFITS TO YOUR ORGANIZATION

Automated notifications

Be instantly notified about all updates of applications in your portfolio right away after vendor releases.

One source

Apptimized Updates analyzes multiple sources of industry data and sends notifications about vendor's application updates and patches that are necessary for you.

No manual work

Purchasing an Apptimized update subscription provides you with a fully automated notification system, which saves you time and reduces your 'to do' list.

Key Product Features

Vulnerabilities notifications

To keep your infrastructure secure and reduce the risk of viruses getting into your company's computers, Apptimized collates information from reliable sources about the latest application vulnerabilities. You will get notified about vulnerabilities that could affect applications in your portfolio.

Configure updates options

Apptimized provides you with an adjustable notification system, allowing you to assign notifications of new releases to application owners or those responsible for their monitoring. So as not to be overwhelmed with notifications for applications not in your estate, you can select only those that apply to you.

Apptimized Evergreen

Update monitoring is one stage available in Apptimized simplifying your application management. Seamless integration with other Apptimized Evergreen solutions provides you with an environment to faster process your application packaging, repackaging or testing requirements.

Current application status

The ability to choose which applications to monitor and view its current version status. Apptimized will keep all of them up-to-date and notify you if any updates are missing.

Download apps

Get the ability to download updated apps directly from your centralized portfolio without additional time-consuming procedures and have a holistic view of the estate.
